                                                                                    This sequence represents human chemokine receptor CXCR3a-specific reverse transcriptase-PCR (RT-PCR) primer SCM59, used with primer SCM57 (AAZ32719) to amplify human chemokine receptor CXCR3a cDNA for expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human chemokine receptor CXCR3a-specific RT-PCR primer SCM59.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     31-JAN-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAZ32720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 20 BP; 4 A; 10 C; 2 G; 4 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAV73026-V73071 are probes used to detect a single-base mutation in a human ras oncogene. These probes comprise 12-43 nucleotides of formula 5', B-Q-D-3', Q = 3 nucleotides complementary to the mutated codon, and B and D each = 0-20 nucleotides complementary to the ras sequences flanking the mutated codon. The probes are useful for detecting cancers associated the mutated codon. The probes are useful for detecting cancers associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bos JL,

CC both forms was detected in human Th1 and Th2 cells and also faintly in CC spleen. Chemokines are a family of small cytokines which bring about the CC cretuitment of leukocytes during inflammation. The CXC chemokines mostly CC attract neutrophils, while the CC chemokines are less selective. All CC chemokine receptors are seven transmembrane G-protein coupled receptors CC and most are receptors for a number of chemokines. CXCR3a being a CC receptor for the CXC chemokines IP10 and Mig. CXCR3a is expressed in CC cativated, but not in resting T-lymphocytes, and may therefore play an CC cell mediated inflammatory conditions. CXCR3b may have an altered pattern of tissue distribution and function in the inflammatory process. Cells captessing the active CXCR3b are useful for identifying ligands, CC expressing the active CXCR3b are useful for identifying ligands, CC especially agonists and antagonists, of a chemokine receptor. In CC addition, the receptor facilitates identification of chemokines CC CXCR3b. The modulation of inflammatory responses is of therapeutic central collections with a chemokines in the inflammatory conditions with a chemokine receptor.

Genome sequence of Chlamydia pneumoniae

Page 1522; Disclosure; 1912pp; English

AAX91991-X97517 represent PCR primers used to amplify open reading frames and other nucleic acid sequences from the genome of Chlamydia pneumoniae (see AAX91990). C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema The polypeptides

                                                                                                                                                                                                                                                                                                                         The present sequence represents the a fragment of the upstream sequence of the coding region for vascular endothelial cell growth factor (VEGF). Antisense oligonucleotides targetted to this region inhibit at least 50% of VEGF expression by the cell. The antisense oligonucleotides can inhibit the growth of solid tumor and are useful as anticancer agents are for treating rheumatic arthritis and diabetic retinitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        An antisense nucleic acid compound against vascular endothelial cell growth factor (VEGF) - useful as an anticancer agent, and for treatme of rheumatic arthritis and diabetic retinitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    solid tumor growth; diabetic retinitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vascular endothelial cell growth factor; VEGF; antisense oligonucleotide, solid tumor growth; anticancer agent; rheumatic arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       least 50 % of VEGF expression by the cell. The antisense oligonucleotides can inhibit the growth of solid tumor and are useful as anticancer agents and for treating rheumatic arthritis and diabetic retinitis

Such inhibitors can be formulated into drug compositions for prevention or treatment of HIV infection, with inhibition of expression of CXCR4 or/and CCR5 gene. Sequences AAZ31307-362 represent antisense oligonucleotides to the CXCR4 gene

2002-217180/27.

New G-protein coupled receptor polypeptides and nucleic acids, useful f diagnosis, prevention or treatment of hematopoietic, neurodegenerative, immune and signal transduction pathway disorders. for

Example 2 Page 380; 492pp; English.

antiasthmatic; antilipaemic; antialization; autilization; according and antiinflammatory. They can be used in gene therapy and vaccine CC production. The GPCR proteins can be used for treating or preventing GPCR CC -associated disorders such as cardiomyopathy, atherosclerosis, or a CC disorder related to cell signal processing and metabolic pathway compared to in humans. GPCR proteins and the polynucleotides encoding them are useful for determining the presence of or predisposition to a CC disease, especially cancer associated with altered levels of GPCR CC proteins and polynucleotides, by measuring the level of protein CC expression or the amount of nucleic acid from a mammal and comparing it with another mammal not having or not predisposed to the disease. GPCR CC receptor or a downstream effector that binds to GPCR, for screening of a candidate substance interacting with an olfactory receptor polypeptide, its fragments or variants. The present sequence represents a PCR primer activities such as: antidiabetic; anorectic; immunomodulator; cytostatic; neuroprotective; nootropic; antiparkinsonian; analgesic; osteopathic; immunosuppressive; metabolic; ophthalmological; antibacterial; virucide; fungicide; protozoacide; hypertensive; hypotensive; anti-HIV; antiulcer; antiastimatic; antilpaemic; antiallergic; antiinfertility; haemostatic; antiastimatic; antilpaemic; antiallergic; antiinfertility; haemostatic; The present invention describes novel human G protein-coupled receptors (GPCR) designated GPCR1-36 from the present invention. The GPCRs can have

Human; mouse; alpha-catenin; primer; ss; cytostatic; cadherin-catenin related pathway; heart testis; cance

atic; antiinfertility;
cancer; gene therapy;

Human

CTNNA3

exon-specific lower PCR primer

The present invention describes a method for removing a primer sequence (PS) from a primer extended product (I) or blocking restriction endonuclease recognition domain (RERD) in (I) involving digesting (I) with: (a) a RE recognising double stranded (ds) RERD comprised by PS in (I), or (b) an enzyme that recognises ds enzyme recognition site in (I) thus blocking cutting mediated by RERD in (I), respectively. The method can be used for removing a primer sequence from a primer extended product or blocking restriction endonuclease recognition domain in a primer extended product. The method is useful in DNA sequencing methods including medical diagnostics, genetic mapping, genetic identification, forensic analysis and molecular biology research. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to rat Glial cell-line Derived Neurotrophic Factor (GDNF) family receptor alpha-4 (GFRalpha-4; see AAB61636 and AAB61637). GFRalpha-4 is useful in the preparation of a medicament for the treatment of neurodegenerative disease, Alzheimer's disease, Parkinson's disease, motor neuron disease, peripheral neuropathy, spinal cord injury, familial hirschsprung disease, carcinomas, and diseases cord injury, familial hirschsprung disease, carcinomas, and diseases associated with GFRalpha-4 receptor dysfunction and in alleviating pain. The present sequence is a PCR primer for rat GFRalpha-4. This sequence was used in the identification of coding sequences for the GFRalpha-4 proteins of the present invention (see AAF31061-AAF31063)
                                                                                                                                                                                                       Example 4; Col 58; 49pp; English.

                                                                                                                                                                                                                                                                                   The present invention describes a method for preparing a cell population enriched for long-term repopulating human haematopoletic stem cells. The method comprises obtaining a population of cells from human haematopoletic tissue and isolating a population of KDR+ cells. KDR is a human vascular endothelial growth factor receptor (VEGFRII). The novel

                                                                                                                                                                                                                                     cell population can be used to inhibit rejection of a transplanted organ, by administering the KDR+ cells of the donor to a tissue recipient. The present sequence represents a reverse transcription PCR primer for KDR, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                  Preparation of a cell population
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes phosphorothicate antisense oligonucleotides that specifically hybridise with, and inhibit the expression of, nucleic acids encoding human Ship-2 (also called SH2-containing phosphatidylinositol phosphatase-2). Also described is a method of inhibiting the expression of Ship-2 in human cells or tissues in vitro comprising contacting the cells with the phosphorothicate in vitro comprising contacting the tells with the phosphorothicate antisense oligonucleotides. The phosphorothicate antisense oligonucleotides can be used to treat animals (especially humans) suspected of having or being prone to a disease or condition associated with Ship-2 expression. The present sequence represents a PCR primer for

                                                                                                     This oligonucleotide represents 5' primer B7-2 used in the PCR amplification of a 344 nucleotide fragment encoding a central region of the constant domain of feline CD80 (B7-1). The primer based on human and feline CD80 sequences. Peripheral blood mononuclear cell cDNA was used as template. A full-length cDNA (see AAZ34836) for feline CD80 was template. A full-length cDNA (see AAZ34836) for feline CD80 was subsequently obtained. The invention relates to a recombinant virus that contains at least one foreign nucleic acid, inserted into a nonessential genomic region, that encodes feline CD28, CD80, CD86 or CTLA-4 protein, or their immunogenic fragments, and is expressed when the recombinant virus may that the recombinant virus is introduced into a suitable host. The recombinant virus may feat the feet of the recombinant virus may be suitable to the contains the recombinant virus may be suitable to the contains the recombinant virus may be suitable to the contains the recombinant virus may be suitable to the contains the recombinant virus may be suitable to the contains 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        identifying a predisposition to, hereditary haemorrhagic telangiectas (HHT) (also called Osler-Weber-Rendu disease) comprising determining whether a sample of genomic DNA from the subject contains a mutation the gene encoding endoglin (the mutation is indicative of a predisposition to HHT). The method may be used for diagnosing (or identifying individuals with a predisposition to developing) HHT. The present sequence represents a PCR primer for the human endoglin gene, which is used in the exemplification of the present invention
                                     further comprise a foreign nucleic acid encoding an immunogen derived from a feline pathogen. It is used to enhance or suppress an immune response in a feline, particularly as a vaccine
                                                                                                                                                                                                                                                                                                                                                                Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel

                                                                                                                                                                                                                                                                                                                 This invention describes novel human and mouse potassium channel proteins KCNQ2 and KCNQ3. Detecting mutations in sequences that encode KCNQ2 or KCNQ3, or the loss of one copy of these genes, is used for diagnosis and prognosis of benign familial neonatal epilepsy (BFNE), juvenile myotonic epilepsy (NE) or rolandic epilepsy (NE). Cells (or transgenic animals) that express wild-type or mutant KCNQ2 or 3 (also the proteins themselves in cell-free form) are used to screen for agents that can be used to reteat or prevent these forms of epilepsy. Fragments of the encoding nucleic acids are used as probes or primers, either for detecting mutations or for isolation of related sequences, while the complete sequences may be used in gene therapy to provide wild-type protein. Antibodies specific for mutant or wild-type proteins are used as probes or diagnostic reagents and for drug screening. The KCNQ2 and 3 proteins are useful in rational design of drugs and therapeutically (in replacement therapies). The forms of epilepsy associated with mutations in KCNQ2 and 3 sequences can now be diagnosed early (before symptoms are manifest), and better treatment options will be available. AAX57074-X57139 are

```

WPI; 1999-119868/10.

regenerative method which uses a restriction enzyme with a cleavage site separate from it's recognition site.

Example 4; Col 58; 52pp; English.

This sequence is an oligonucleotide used to describe a sequencing method which identifies the first and second nucleotides in double (ds) nucleic acid segments. The method can be used to sequence NNA, for example, in genetic identification, forensic analysis, genetic counselling or medical diagnostics. The method sequences in discrete intervals that start at one end of each DNA segment. The method overcomes problems inherent in other sequencing methods, such as the need for gel resolution of DNA fragments and the generation of artifacts caused by ss DNA segments, and sequence the segments in parallel, to provide continuous sequence information over long intervals. This method is also suitable for automation and multiplex automation to sequence large sets of segments

Sequence 22 BP; 5 A; 6 C; 4 G; 7 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                     This sequence represents a human chromosome alpha-satellite region. The invention relates to the use of a triple-helix forming oligonucleotide for in situ detection of a double-stranded target nucleic acid sequence. The method can be used to detect a genetic disorder e.g. to detect an extra or missing chromosome or fragment or aneuploidy, especially for detecting an extra or missing chromosome 17 or 21. The method can be also be used to screen for individuals at risk of developing a disease or for diagnosing an infectious disease. The use of triple helix forming oligonucleotides allows in situ detection of double stranded target sequence as opposed to prior art uses of developing potential anti-gene therapeutic agents or artificial restriction endonucleases
 Human CFTR PCR primer A (#40).

                                                                                                                                                                                                                                                                                                identification tag, a restriction enzyme recognition sequence, a sequence identification region, and a detectable label, is then hybridised to the target nucleic acid to form a ligated molecule. This ligated molecule is identified using the detectable label, and is then amplified with a primer specific for the cycle identification tag of the adaptor. This process is then repeated on the amplified molecule to gain sequence information. The method can be used in e.g., genetic identification, forensic analysis, genetic counselling, or medical diagnostics. It can be used for sequencing of previously uncharacterised viral, bacterial or protozoan human pathogens, as well as sequencing of genomes of plant and animal species of agricultural, environmental and scientific interest.
                                                                                                                                                                                   stranded, thus preventing the formation of secondary structures that complicate the known sequencing methods that rely on hybridisation to single stranded templates (e.g., sequencing by hybridisation), and overcoming obstacles posed by microsatellite repeats, other direct
                                                                                                                                                                                                                                                    The method does not require high resolution separations and generate signals more amenable to analysis. The method can also be easily automated and can be carried out on DNA that is almost entirely double
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         which uses restriction enzyme adaptors and amplification reactions (e.e. PCR). This method initially involves digesting the double stranded DNA segment to be sequenced with a restriction enzyme to produce a double stranded molecule having a single stranded overhang sequence corresponding to an enzyme cut site. An adaptor having a cycle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 22 BP; 2 A; 9 C; 4 G; 7 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 defective gene, e.g. endoglin, beta- glycan, TGF-beta type I or II receptor or TGF-beta/activin type I receptor. Two primers (AAT13769, AAT13770) were used to amplify a 227 base pair exon sequence of the endoglin gene. Primer pairs used in this method are described in AAT13757
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Page 13;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FTP1 gene of patients with acute lymphoblastic leukaemia (ALL). A fragment complementary to the SHPTP-1 sequence from nucleotides 537-653 is used as a probe to detect a chromosome 12p13 abnormality associated with neoplastic disease, in partic. ALL. The probe hybridises to a part of the region coding for the two tandem SH2 domains (see AAR99312). If the probe will not hybridise DNA of chromosome 12p13 from a patient sample it is indicative of an abnormality, normally associated with neoplasia. Alternatively the wild-type SH-PTP1 or SH-PTP2 gene or protein may be used for comparison to sequenced PTP genes taken from a patient, where differences indicate an abnormality. The activity of SH-PTP1 may also be purposely altered by mutation to effect a change in megakaryocyte function and hence platelet production. (Updated on 25-MAR-2003 to
                         This oligonucleotide is used for constructing a pyruvate decarboxylase enzyme encoding DNA. A recombinant vector comprising this encoding DNA sequence can be used for improving pyruvate decarboxylase activity in a host cell. A recombinant plasmid pCRPDC1 comprising the pyruvate decarboxylase DNA sequence was recombined downstream of the promoter of alpha-tublin gene from Chlamydomonas. The recombinant fine algae cell had an improved pyruvate decarboxylase activity. The algal cell may be used to produce ethanol by culturing it in a suitable medium. The method can prepare ethanol more efficiently than conventionally used methods
                                                                                                                                                                                                                         New pyruvate decarboxylase gene - production of ethanol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pyruvate decarboxylase; ethanol; alpha-tubulin gene; fine alga cell;

                                                                                                AAQ84778 standard; DNA;
                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                        AAQ74042-Q74044 are primers used for the amplification of human interferon-gamma (AAQ74060). They are used specifically for the detection and isolation of this sequence. The primers have the advantage of high sensitivity and reliability and are useful in the pharmaceutical industry
                                                                                                                                                                                                                                                                                                                                          05-NOV-1993;

The beta chain is present in adult globin isoforms. Amplification of the segment was used as marker for globin gene expression, indicating the successful culturing, induction (by cytokines) and differentiation of cultured human yolk sac cells. The patent presents methods of producing cultures of yolk sac stem cells which are CD34(-) MHC class I(-) and class II(-) and are capable of giving rise to blood cells. The yolk sac cells have a wide range of applications including being transplantated into xenogenic hosts as these stem cells do not induce tissue rejection. This process can result in chimeric tissues. See also AAQ84769-80 for other markers. (Updated on 25-MAR-2003 to correct PN

The assay comprises: (1) obtaining a sample of soil or vegetable; (2) treating the sample to lyse fungal cells; (3) effecting a PCR on DNA released by lysis of the fungal cells, using an oligonucleotide primer pair; and (4) detecting DNA fragments generated by the PCR. Also described: (1) an 18-24-mer oligonucleotide primer hybridisable to an oligonucleotide sequence selected from SEQ ID NO:1 to 28; (2) a substrate having immobilised on it the 18-24-mer oligonucleotide primer; (3) a primer composition comprising a pair of 18-24-mer oligonucleotide primer; (3) a primer composition comprising a pair of 18-24-mer oligonucleotide primers; (4) a kit for performing the assay method, for nucleic acid extraction from bost vegetable tissue; (5) extracting nucleic acid from the soil; and (6) extracting pathogen DNA comprises the sample of extracting pathogen DNA comprises by pathogenic fungal species, particularly Microcentrospora acerina, Fibularhioctonia carotae or pathicularly microcentrospora acerina, Fibularhioctonia carotae or pathicular microcentrospora acerina, Fibularhioctonia carotae or pathicular microcentrospora acerin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

밁

The present invention of soil or vegetables

describes an assay for detecting fungal in by pathogenic fungal species, particularly

infection

The invention comprises oligonucleotides that detect polymorphisms within the pig KIT gene. The oligonucleotides of the invention may also detect polymorphisms within the pig melanocyte stimulating hormone-receptor (MCIR) gene. The oligonucleotides of the invention are useful for discriminating a variety of pig. The present DNA sequence represents a capture oligonucleotide that was used in an example of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The assay comprises: (1) obtaining a sample of soil or vegetable; (2) creating the sample to lyse fungal cells, using an oligonucleotide primer released by lysis of the fungal cells, using an oligonucleotide primer CC pair; and (4) detecting DNA fragments generated by the PCR. Also coligonucleotide sequence selected from SEQ ID NO:1 to 28; (2) a substrate coligonucleotide primer hybridisable to an oligonucleotide primer sequence selected from SEQ ID NO:1 to 28; (2) a substrate composition comprising a pair of 18-24-mer oligonucleotide primer; (3) a cc primer composition comprising a pair of 18-24-mer oligonucleotide primers; (3) a cc primer composition the assay method, for nucleic acid extraction cf from soil or for pathogen DNA extraction from host vegetable tissue; (5) cc extracting nucleic acid from the soil, and (6) extracting pathogen DNA cc particularly Microcentrospora acetina, Fibularinizoctonia carotiae or composition of soil or vegetables by pathogenic fungal species. The present sequence represents a PCR primer for used in the detection of fungal infection, which is used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

The method comprises analysis the genotype of specific gene polymorphisms in a clinical nucleic acid sample. The gene polymorphisms analysed are one or both of the following two sets: variation at base 1648 of glycoprotein la gene, variation at base 190 of chemokine receptor 2 gene, variation at base 1100 of apolipoprotein C-III gene, variation at base 825 of G-protein beta3 submit gene, and variation at base -850 of tumour necrosis factor alpha gene, variation at base -830 of tumour necrosis factor alpha gene, variation at base 394 of insulin receptor substrate 1 gene, variation at base 1100 of glycoprotein lbalpha gene. The present sequence represents a human polynucleotide, which is referred to in the course of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     comprising determining whether a subject has mutation in a subject the mutation comprises a variant nucleic acid sequence in or corresponding to codon 608, 644, 145, 471, 527 or 269 of human LMNA, two or more mutations. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment odiseases or conditions associated with the mutation of LMNA, such as progeroid disease that is Hutchinson-Gilford Progeria Syndrome, or arteriosclerosis or atherosclerosis. This sequence corresponds to a primer used in a microsatellite analysis of chromosome 1g21.3-23.1 containing the laminin A gene.

                                                                                                                                                                                                                                                                           The invention describes a method of identifying a human leukocyte antigen (HLA) genotype of a subject comprising; obtaining a sample comprising a template nucleic acid from the subject; amplifying the template nucleic acid with HLA allele-specific forward primers and HLA allele-specific reverse primers to form amplification products; hybridising the amplification products with an HLA locus-specific capture oligonucleotide; and detecting the detectable complexes to identify the HLA genotype of the subject. The present sequence represents one of 276 HLA locus-specific capture oligonucleotides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 bacterial, fungal or parasitic infection. The disease may also be cancer, inflammatory disease, cardiovascular disease, metabolic disease, neurological disease and may have a genetic basis. The methods are useful for screening for and monitoring the disease. The present sequence represents a PCR primer for a major urinary protein (MUP), which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying an HLA genotype of a subject by hybridizing the amplification products with an HLA locus-specific capture oligonucleotide and detecting the detectable complexes to identify the HLA genotype of the subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    30-DEC-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      HLA locus-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               06-MAY-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 21

The method is useful the diagnosis of the genetic risk of restenosis following balloon or stent coronary angioplasty. The method has high accuracy and high estimation ratio. The present sequence is used in the exemplification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              more polymorphisms selected from groups including the polymorphism of the CC base at position 1019 in connexin 37 gene, the polymorphism of the base at position -863 in tumour necrosis factor alpha gene, and the CC calt position -863 in tumour necrosis factor alpha gene, and the CC polymorphism of the base at position 4070 in apolipoprotein E gene, which CC related to myocardial infarction; (b) determining the genetype of a CC nucleic acid sample based on the polymorphism data obtained in (a); and CC (c) determining the genetic risk of myocardial infarction from the genotype determined in (b). Also described: (l) diagnosing risk from CC myocardial infarction by analysing polymorphisms of specified genes before genotyping of the nucleic acid sample based on the obtained CC polymorphism data, and determining genetic risk of myocardial infarction for the determined genotype; (2) a kit for detecting genotypes containing CC or more polymorphisms of the defined genes; and (3) immobilised nucleic acids obtained by fixing 2 or more of the already specified gene onto an insoluble support. The method can be used for diagnosing risk from CC myocardial infarction, which is applicable in providing supplementary information for appropriate treatment and also in the study of onset CC exemplification of the present sequence represents a primer which is given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

         cc mucleic acid sequence (S1) encoding a protein of the lipocalin protein cf family, and a nucleic acid sequence (S2) encoding a peptide sequence of 5 cc -250 amino acid residues. Also described: (1) a nucleic acid construct cc (II) comprising a stress inducible promoter operatively isolated from a nucleic acid sequence encoding a member of the lipocalin protein family by a nucleotide sequence flanked by nucleic acid sequences recognised by a site specific recombinase, or by insertion such that it is inverted with respect to the transcription unit encoding a member of the lipocalin cc protein family, in which the construct additionally comprises a nucleic acid sequence comprising a tissue specific promoter operatively linked to grotein family, in which the construct additionally comprises a nucleic acid sequence comprising a tissue specific promoter operatively linked to a gene encoding the coding sequence for the site specific recombinase; (2) a host cell transfected with (1) or (II); (3) a transgenic non-human cc animal comprising cells expressing the protein encoded by (I) or (II); and (4) detecting a gene activation event in a cell in vitro or in vivo by assaying the host cell of (2) or the transgenic animal of (3) in which the cell or animal is subjected to a gene activation event that is the cell or animal is subjected to a gene activation event that is the detection of gene activation events. The gene activation events
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

A genetic construct encoding a patched polypeptide is used to treat an animal having a disorder comprising loss of function of a wild-type patched gene, such as cancer, and can enhance patch function in e.g. wound healing and aging. This sequence represents a primer used to determine the intron/exon boundaries of the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 21 BP; 5 A; 3 C; 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes an assay for phenotyping the patched status of a cell comprising detecting in a sample of mammalian cells the presence or absence of a genetic lesion having aberrant modification or mutation of a patched gene or mis-expression of the patched gene. The assay is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Phenotyping the patched status of a cell for diagnosing a genetic predisposition for a tumor comprises detecting the presence or absence of a genetic lesion having aberrant modification, mutation or mis-expression
Method for diagnosing risk from myocardial infarction based on gene
                                                                                                                                                                                                                                                                                                                                      Human glycoprotein Ib alpha (1018C-T) polymorphism primer SEQ ID NO:52

                                                                                                                                                                                                                                                                                                                                                                             different base sequences depending upon the presence or absence of the modification of interest. Accordingly, a device comprising an array of probes is provided to hybridise with and select the altered DNA sequences that comprise the modifications of interest such as a CpG island. In particular, this invention refers to analysing the methylation pattern of a region of the promoter for the tumour suppressor gene p16 from two human lung tumour cell lines H69 and H1618. This oligonuclectide sequence is a human DNA probe used to immobilise CpG methylated DNA of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method for analysing chemically modified macromolecules. Specifically, it refers to a high throughput method for the parallel analysis of many potential sites of chemical modification (e.g. methylation) in DNA. The present invention describes treating the DNA with one or more chemical reagents that result in different base sequences depending upon the presence or absence of the modification of interest. Accordingly, a device comprising an array of probes is provided to hybridise with and select the altered DNA sequences that comprise the modifications of interest such as a CpG island. In particular, this invention refers to analysing the methylation pattern of a region of the promoter for the tumour suppressor gene pl6 from two human lung tumour cell lines H69 and H1618. This oligonucleotide sequence is a human DNA probe used to immobilise CpG methylated DNA of the

                                                                                                                                                                                                                                                                                                                                            that responds to modulation of gene expression or activity in a cell, tissue or organism. The disease or condition may include pulmonary diseases such as restenosis, atherosclerosis, Alzheimer's disease, Parkinson's disease, epilepsy, dementia, huntington's disease or amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised gene therapy applications. The current sequence is that of the siNA RNA hybrid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a double-stranded short interfering nucleic acid (siNA) molecule that down-regulates expression of an endogenous mammalian target gene comprising one or more chemical modifications and each strand of the double-stranded siNA comprises about 21 nucleotides. The siNA of the invention demonstrates antiarteriosclerotic, neuroprotective, nootropic, antiparkinsonian and anticonvulsant activities and may be

The invention relates to novel proteins (I) of human origin including CC TCH2200 (a vanilloid receptor protein), TCH212 (a P-type ATPase protein), CC TCH230 (a sodium-dependent bile acid transporter protein) and TCH234 (a CC Na + /H + exchange transporter protein) (and other protein) and TCH234 (a CC activities), are new he protein and encoding genes are useful for the grevention and treatment of a wide range of diseases including CC hyperlipemia, arteriosclerosis, diseases of the reproductive organs, CC diseases of the digestive system, nervous system diseases, kidney CC diseases, respiratory diseases, pancreas diseases, inflammatory CC diseases, respiratory disease, pancreas diseases, inflammatory CC diseases, respiratory disease, ulcerative colitis, benign prostate CC hypertrophy, prostatitis, chemorrhegic colitis, asthma, bronchitis, CS joegren's disease, multiple sclerosis, digestive system ulcer, hay CC fever, anaphylactic shock, atopic dermatitis, chronic rheumatoid CC arthritis, leukopenia, spleen hypofunction, diabetes, heart failure, QT CC disease, angina pectoris, pancreatitis, lupus erythematodes, and cancer CC bladder, stomach and intestine. This sequence corresponds to a primer collection are the activities of the testis, character.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method of treating ileus in a patient by administering a pharmaceutical composition that includes carbon monoxide. In an example from the invention, the suppression by CO of ileus associated with surgical manipulation of the small intestine was demonstrated in an animal (murine) model. Real-time PCR was used to examine pro- and anti-inflammatory cytokine expression following surgery and the effects of CO. The present sequence is that of a PCR primer for haem oxygenase (HO-1), which was used in this real-time PCR. CO

                                                                                                                                                                                                                                        Parkinson's disease, epilepsy, dementia, huntington's disease or amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for gene therapy applications. The current sequence is that of the siNA DNA-RNA hybrid of the invention.
                                                                                                                                                                                                                                                                                   useful for down regulating the expression of an endogenous mammalian target gene and therefore in the treatment of any disease or condition that responds to modulation of gene expression or activity in a cell, tissue or organism. The disease or condition may include pulmonary diseases such as restenosis, atherosclerosis, Alzheimer's disease, Parkinson's disease, epilepsy, dementia, huntington's disease or amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised amyotrophic lateral sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (SiNA) molecule that down-regulates expression of an endogenous metarget gene comprising one or more chemical modifications and eac of the double-stranded siNA comprises about 21 nucleotides. The state invention demonstrates antiarteriosclerotic, neuroprotective,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mcswiggen

                downregulate expression of the human c-fos gene by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA). The siNAs can be unmodified or chemically modified, can contain deaxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pharmacogenomics; gene function analysis; gene mapping; central nervous system disorder; Alzheimer's disease; entral nervous system disorder; Alzheimer's disease; parkinson's disease; Huntington's disease; epilepsy; dementia; amyotrophic lateral sclerosis; cancer; proliferative disease; restenosis; polycystic kidney disease; inflammatory disease; allergic disease; polycystic kidney disease; inflammatory disease; transplant rejection; viral infection; HIV infection; autoimmune disease; transplant rejection; vasotropic; nootropic; antiparkinsonian; neuroprotective; cytostatic; antiinflammatory; antiallergic; virucide; anti-HIV; immunosuppressive; antiinflammatory; nephrotropic; human; c-fos; DNA-RNA hybrid;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Synthetic

They may be used for treating central nervous system lesions and injuries (e.g., Alzheimer's disease, Parkinson's disease, Huntington's disease, epilepsy, dementia or amyotrophic lateral sclerosis); various cancers; other proliferative diseases (e.g., restenosis and polycystic kidney disease); inflammatory and/or allergic diseases; viral infections (including HIV infection); autoimmune diseases; and transplant rejection. The siNas are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisma). The present sequence represents a chemically modified siRNA targeted to the human c-fos mRNA transcript.
                                                                                   The invention relates to a method of identifying a class I or II Human Leukocyte Antigen (HLA) genotype of a subject using hybridisation and amplification assay. The method is used for determining the HLA genotyg of a subject. The present sequence represents a HLA class I allele
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US2003165884-A1

                                                                                                                                                                         CC downregulate expression of the human c-fos gene by RNA interference. The CC sinAs may or may not comprise ribonucleotides and may be double or single Stranded. They further comprise sense and antisense regions, or CC alternatively are assembled from a sense oligonucleotide and an antisense CC (sinNA), double-stranded RNA, intero-RNA (miRNA) and short hairpin RNA (sinNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a CC vector or enzymatically synthesised. The invention also relates to kits CC for the in vitro or in vivo delivery of siNA; conjugates and/or complexes CC expression of the c-fos gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the creatment of a variety of conditions. They may be used for treating CC entral nervous system lesions and injuries (e.g., Alzheimer's disease, CC amyotrophic lateral sclerosis); various cancers; other proliferative and/or allergic diseases; viral infections (including HIV infection); and gene mapping (e.g., of single nucleotide polymorphisms). CC autoimmune diseases; and transplant rejection. The siNAs are also useful CC variation, and gene mapping (e.g., of single nucleotide polymorphisms). CC the human c-fos mRNA transcript.
                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC tyrosine kinase activity or members of the protein tyrosine kinase of tyrosine kinase activity of cells, comprising obtaining a sample of cells, comprising obtaining a sample of cells, correlating the expression of the markers to the compound's ability to correlating the expression of the markers to the compound's ability to correlate with compound sensitivity of resistance of cells in correlate with compound sensitivity or resistance of cells associated with a disease state, and (3) identifying polymucleotides and compound sensitivity or resistance of cells associated with a disease state, compound sensitivity or resistance of cells associated completed with a disease state, compusing subjecting the plurality of cell lines to one or more compound, analysing the expression pattern of compounds of polymucleotides or polypeptides that predict the sensitivity or resistance of cells associated with a disease state by using the expression pattern of complete compounds, analysing the expression pattern of complete compounds, analysing the expression pattern of compounds and converted with a disease state by using the compounds of cells associated with a disease state by using the compounds of cells associated with a disease state by using the compounds of the polymucleotides or polypeptides are useful in predicting the compounds that interact with protein tyrosine kinases and/or polymeleotides and polymeleosides and can be used in gene therapy. The polymucleotides are useful in predicting the continuity of compounds that interact with protein tyrosine kinases and/or polymeleotides with a disease state of individualized concer) based on patient response at a molecular level. The present tyrosine is used in the exemplification of the present invention.

CC SINAS may or may not comprise ribonuclectides and may be double or single contraded. They further comprise sense and antisense regions, or cc alternatively are assembled from a sense oligonuclectide and an antisense coligonuclectide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonuclectides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits (for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the c-fos gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating central nervous system lesions and injuries (e.g., Alzheimer's disease, epilepsy, dementia or complexes (e.g., restenosis and polycystic kidney disease); inflammatory and/or allergic diseases; viral infections (including HIV infection); cauchy autoing screening, diagnosis; therapeutic target identification and control or drug screening, diagnosis; therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene control or treatment sequence represents a chemically modified sirNA targeted to the present sequence represents a chemically modified sirNA targeted to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    vasotropic; nootropic; antiparkinsonian; neuroprotective; cytostatic; antiinflammatory; antiallergic; virucide; anti-HIV; immunosuppressive anticonvulsant; nephrotropic; human; c-fos; DNA-RNA hybrid; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polycystic kidney disease; inflammatory disease; allergic disease; yiral infection; HIV infection; autoimmune disease; transplant rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human c-fos gene by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New short interfering nucleic acid downregulates expression of the gene useful for treatment and diagnosis of diseases, e.g. cancer a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to detecting apoptosis in a cell and involves detecting a decrease in an ELAVL-1 polypeptide. The method is useful for treating a disease e.g., cancer or inflammatory, autoimmune or neurodegenerative disease by administering a modulator of ELAVL-1 gene expression or functional activity to an individual. The present sequence represents a human ELAVL-1 CDS fragment amplifying PCR primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detecting apoptosis in a cell, useful for treating a disease e.g., or inflammatory, autoimmune or neurodegenerative disease, comprises detecting a decrease in an ELAVL-1 polypeptide or nucleic acid.

The present invention describes a predictor set comprising a plurality of CC polynucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase (CC pathway. Also described: (1) predicting whether a compound is capable of CC modulating the activity of cells, comprising obtaining a sample of cells, CC correlating whether the cells express a plurality of markers, and CC correlating the expression of the markers to the compound's ability to correlate with compound sensitivity or resistance of cells associated (CC with a disease state, and (3) identifying polynuclaotides and CC polypeptides that predict compounds ensitivity or resistance of cells associated (CC associated with a disease state, comprising subjecting the plurality of cell lines to one or more compounds, analysing the expression pattern of (CC cell lines to one or more compounds, analysing the expression pattern of (CC cell corresistance of cells associated with a disease state by using the compounds of cells associated (CC polypeptides have cytostatic activities, and can be used in gene therapy. The polynucleotides and polypeptides are useful in predicting the compounds that interact with protein tyrosine kinase and/or protein tyrosine kinase pathways. These may be used in determining drug sensitivity of compounds that interact with protein tyrosine kinases and/or cannot based on patterns to allow the development of individualized cannot used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         tyrosine kinase pathways.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotides and polypeptides for predicting the activity of compounds that interact with protein tyrosine kinases and/or protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2003-636735/60

                                                                                                                                                 The invention describes a polynucleotide (I) of the endothelin (EDN)/endothelin converting enzyme (ECE)/receptors of EDN and ECE (EDNR) gignaling system which is associated with a cardiovascular disease. (I), the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I) or (II) is useful for producing cells capable of expressing a molecular variant polypeptide which is associated with a cardiovascular disease. (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing a molecular variant gene comprising (I) is useful for identifying and obtaining a pro-drug or drug capable of modulating the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product, or for identifying and obtaining an inhibitor of the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product. The isolated proteins and composition for treating a cardiovascular disease such as polymucleotides encoding them are useful for preparation of a polymucleotides encoding them are useful for preparation of a pharmaceutical composition for treating a cardiovascular disease such as converted the encoding them are useful for preparation of a pharmaceutical composition for treating a cardiovascular disease such as converted the encoding them are useful and the encodin

EDN/ECE/EDNR signaling system are useful as forensic markers, for creating a transgenic animal and in creation of a solid support comprising polynucleotides, genes, vectors, polypeptides, antibodies or host cells of the invention. This sequence represents a PCR primer used to identify single nucleotide polymorphisms in DNA encoding cardiovascular regulator proteins of the EDN/ECE/EDNR signaling pathway
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polynucleotide of the endothelin/endothelin converting enzyme/receptors of endothelin and endothelin converting enzyme signaling system associated with cardiovascular disease, useful for treating the

                                                                                                                                 The invention relates to detecting apoptosis in a cell and involves detecting a decrease in an ELAVL-1 polypeptide. The method is useful for treating a disease e.g., cancer or inflammatory, autoimmune or neurodegenerative disease by administering a modulator of ELAVL-1 gene expression or functional activity to an individual. The present sequence

                                     The invention relates to methods for producing a polypeptide which comprises, cultivating a fungal host cell in a medium conducive for the production of the polypeptide and isolating the polypeptide from the cultivation medium, wherein the fungal host cell comprises a first nucleic acid sequence encoding the polypeptide in tandem with a second nucleic acid sequence comprising a crippled translational initiator sequence operably linked to agene encoding a selectable marker, wherein the copy number of the first nucleic acid sequence has been increased by culturing the cell under conditions that select for multiple copies of the selectable marker. The method is used to produce enzymes, hormones, receptors, antibodies and reporters or their fragments and variants. The present sequence is Aspergillus oryzae primer used for sequencing pBANe10 -1-4 variant. This sequence is used to illustrate the method of the
                                                                                                                                                                                                                                                                                              High-yield production of polypeptides in fungi, useful particularly for preparing enzymes, using construct that includes reporter gene with crippled transcription initiator.

                                                                                                                                                                                                                                                                      Example
                                                                                                                                                                                                                                                                                                                                                               WPI; 2002-479179/51.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               has a highly likelihood of having the disorder. The method is useful for diagnosis and follow up of a mental disorder e.g. schizophrenia, manic depression, Tourette's syndrome and a neurodegenerative disorder such as Parkinson's disease, Alzheimer's disease or Huntington's disease in an individual. The present sequence is a PCR primer for amplification of human alpha7 AChR receptor nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13-JAN-2000; 2000US-00482751

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                멂
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      80
                                                                                                                                                                                                                                   CC signaling system which is associated with a cardiovascular disease. (1), CC the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I) or (III) is useful for producing cells capable of expressing a molecular variant polypeptide which is associated with a cardiovascular disease. (C (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing a molecular variant gene comprising (I) is useful for identifying and complexity of a molecular variant of a polypeptide of modulating the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system (C or its gene product, or for identifying and obtaining an inhibitor of the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product. The isolated proteins and CC polynucleotides encoding them are useful for preparation of a pharmaceutical composition for treating a cardiovascular disease such as CC pharmaceutical composition for treating a cardiovascular disease such as CC composition proteins and familial CC polynucleotides of a spene or a polynucleotide fragment of the CC camprison attended to a spene or a polynucleotide fragment of the CC composition attended as proteins and familial composition attended as a polynucleotide fragment of the CC composition attended and familial composition of a polynucleotide fragment of the CC composition attended and familial composition attended to creating a transgenic animal and in creation of a solid support composition of description of a solid support composition proteins and familial composition and familial composition and familial composition and familial composition attended to composition of a solid support composition and familial composi
                                                                                                                      comprising polynucleotides, genes, vectors, polypeptides, antibodies or host cells of the invention. This sequence represents a PCR primer used to identify single nucleotide polymorphisms in DNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel polynucleotide of the endothelin/endothelin converting enzyme/receptors of endothelin and endothelin converting enzyme signaling system associated with cardiovascular disease, useful for treating the disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a polynucleotide (I) of the endothelin (EDN)/endothelin converting enzyme (ECB)/receptors of EDN and ECE (EDNR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Endothelin; EDN; endothelin converting enzyme; ECE; endothelin receptor; EDNR; signaling system; cardiovascular disease; coronary heart disease; hypertension; atherosclerosis; angiogenesis; fatty acid metabolism; diabetes; familial hypercholesterolaemia; forensic marker; transgenic animal; solid support; cardiovascular regulator; SNP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Brinkmann U,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 6;
